Celeste

What It Is

Celeste is a simple plugin that adds shooting stars to your Minecraft server. Inspired by the shooting stars from Animal Crossing and the falling stars from Breath of the Wild, this plugin brings some celestial ambience to your Minecraft world.

https://github.com/IdreesInc/Celeste

Useful Commands

`/shootingstar [player]` Summons a shooting star in the sky directly above the player. If no player is given, spawns one above the summoner. Permission: celeste.shootingstar

`/fallingstar [player]` summons a falling star directly above the player. If no player is given, spawns one above the summoner. Permission: celeste.fallingstar

Notes

During a new moon, you might see a meteor shower (a higher incidence of both shooting and falling stars). This is especially noticeable in The Feywild.
