

DynMap

What It Is

Dynmap is a Google Maps-like map for your Minecraft server that can be viewed in a browser. Easy to set up when making use of Dynmap's integrated webserver which works out-of-the-box, while also available to be integrated into existing websites running on Apache and the like. Dynmap can render your worlds using different renderers, some suitable for performance, some for high detail.

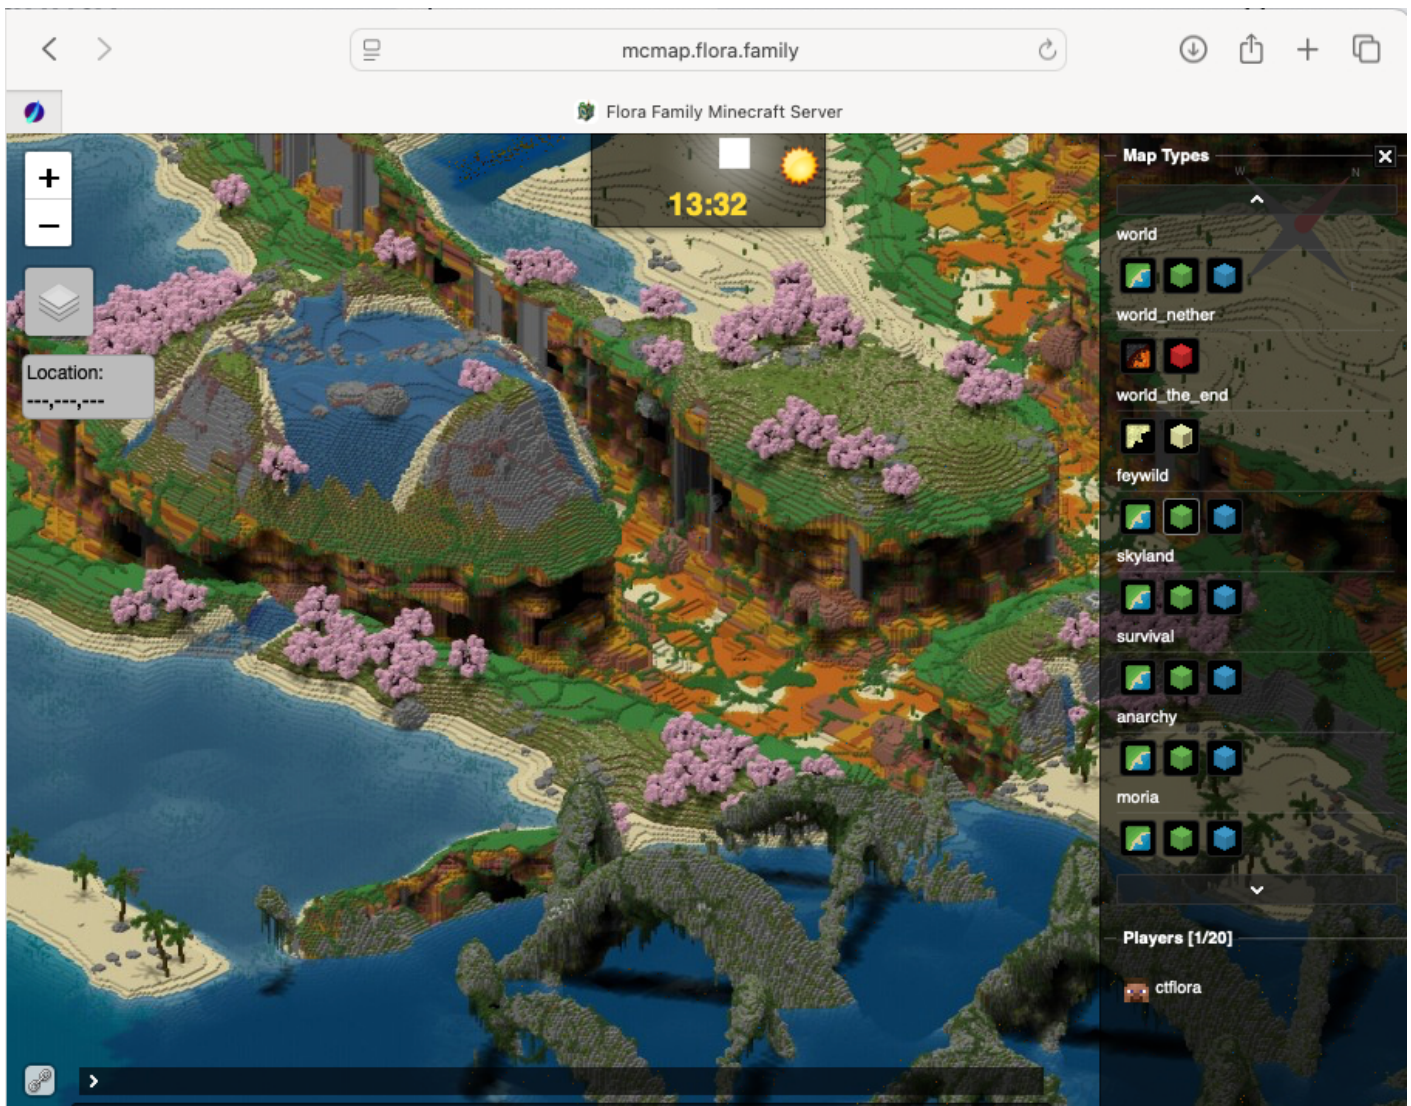

<https://mcmap.flora.family> <https://dynmap.wiki.gg>

Useful Commands

`/dynmap quiet` - Silence the rendering messages.

`/dynmap fullrender [world]` - Render the world's chunks to the map

How to Use

Right Sidebar

Use the right sidebar (collapsed by default) to choose the worldmap you want to see. Each world has a few options for the map.

- Flat Map (2-dimensional) - this one is probably the most useful.
- Isometric Surface Map (3-dimensional) - this one is probably the most cool!
- Isometric Cave Map (3-dimensional) - this one is also pretty cool, but it can get *really* busy.

There's also an online player list below the map list. Click the player and the map will switch to the world that they're in, centered on them.
